1.1	07.06.2023	Added description about temperature lapse rates

Introduction

High resolution, downscaled climate model data are used in a wide variety of applications in environmental sciences. Here we present the CHELSA-TraCE21k downscaling algorithm to create global monthly climatologies for temperature and precipitation at 30 arcsec spatial resolution in 100 year time steps for the last 21,000 years. Paleo orography at high spatial resolution and at each timestep is created by combining high resolution information on glacial cover from current and Last Glacial Maximum (LGM) glacier databases with the interpolation of a dynamic ice sheet model (ICE6G) and a coupling to mean annual temperatures from CCSM3-TraCE21k. Based on the reconstructed paleo orography, mean annual temperature and precipitation was downscaled using the CHELSA V1.2 algorithm.

Grid Structure

All global CHELSA-TraCE21k products are in a geographic coordinate system referenced to the WGS 84 horizontal datum, with the horizontal coordinates expressed in decimal degrees. The CHELSA layer extents (minimum and maximum latitude and longitude) are a result of the coordinate system inherited from the 1-arc-second GMTED2010 data which itself inherited the grid extent from the 1-arc-second SRTM data.

Table 1. Grid extent of the GeoTiff files

description	value
Resolution	0.0083333333
West extent (minimum X-coordinate, longitude):	-179.9959722222
South extent (minimum Y-coordinate, latitude)	-89.9959722222
East extent (maximum X-coordinate, longitude)	179.9956930045
North extent (maximum Y-coordinate, latitude)	83.9956937485
Rows	20880
Columns	43200

Note that because of the pixel center referencing of the input GMTED2010 data the full extent of each CHELSA grid as defined by the outside edges of the pixels differs from an integer value of latitude or longitude by 0.000138888888 degree (or 1/2 arc-second). Users of products based on the legacy GTOPO30 product should note that the coordinate referencing of CHELSA (and GMTED2010) and GTOPO30 are not the same. In GTOPO30, the integer lines of latitude and longitude fall directly on the edges of a 30-arc-second pixel. Thus, when overlaying CHELSA with products based on GTOPO30 a slight shift of 1/2 arc-second will be observed between the edges of corresponding 30-arc-second pixels.

Grid cells around the dateline can be filled with 0 in case of pr. These values are due to a problem with the interpolation algorithm as the algorithm could not wrap around the dateline. These values can be disregarded.

Table 2. Grid extent of the GeoTiff files for the temperature lapse rate (tz)

description	value
Resolution	3.7088976407
West extent (minimum X-coordinate, longitude):	0.097913248
South extent (minimum Y-coordinate, latitude)	-87.1590945557
East extent (maximum X-coordinate, longitude)	356.1520867552
North extent (maximum Y-coordinate, latitude)	87.1590945572
Rows	48
Columns	97

Format and File Organization

CHELSA-TraCE21k data files are provided in GeoTiff format. Due to the size of the CHELSA-TraCE21k archive, most files were compressed using gdal_translate with the parameters COMPRESS=DEFLATE and PREDICTOR=2, which does not require an additional unpacking procedure before the data can be used. The data can be read by all common GeoTiff – compliant programs. In R for example, GeoTiff files can be read using the ‘raster’ package (e.g. g1 <- raster(path_2_GeoTiff_file)). The metadata can be read using e.g. gdal (e.g. gdalinfo path_2_GeoTiff_file).

Dimensions

All files contain variables that define the dimensions of longitude, latitude.

Table 3. Dimension Variables Contained in the GeoTiff Files

Name	Description	type	Attribute
lon	Longitude	double	degrees_east
lat	Latitude	double	degrees_north

File Naming Conventions

The filename of each CHELSA-TraCE21k data product follows a similar structure including the respective model used, the variable short name, the respective time variables, and the accumulation (or mean) period in the following basic format:

CHELSA-[*model*]-[*variable*]-[[*month*]]-[*timeID*]-[*version*].tif

month is only available for *pr*, *tasmax*, *tasmin*, but not for annual values such as *dem*, *swe*, *scd*, *glz*, or *bio*.

Variables

All files contain one variable of CHELSA-TraCE21k below. Files are 2 dimensional. Time-averaged files usually indicate the mid point date for the aggregation period (e.g. April 15 for monthly aggregated data). All data follows a proleptic-gregorian calendar. A glossary with a brief description of each variable is available in the separate GEOS-5 Variable Definition Glossary, available on the GMAO web page.

Table 3. List of Variables

varname	shortname	Longname	Units	Description
tasmax	tasmax	Daily Minimum Near-Surface Air Temperature	K/10	maximum near-surface (2 meter) air temperature
tasmin	tasmin	Daily Maximum Near-Surface Air Temperature	K/10	minimum near-surface (2 meter) air temperature
pr	pr	Precipitation	kg m-2 month-1	precipitation flux (includes both liquid and solid phases)
scd	scd	Snow cover days	Count	Average number of days with snow cover per year
swe	swe	Snow water equivalent	kg m-2 year-1	Number of dry periods of more than 5 days
bio1	Annual Mean Temperature	Annual Mean Temperature	C	Mean of monthly ($\text{tasmax} + \text{tasmin}$)/2
bio2	Mean Diurnal Range	Mean Diurnal Range	C	$\text{tasmax} - \text{tasmin}$. The annual mean of all the monthly diurnal temperature ranges. Each monthly diurnal range is the difference between that month's maximum and minimum temperature
bio3	Isothermality	Isothermality	unitless	The mean diurnal range (bio2) divided by the

				annual temperature range (bio7).
bio4	Temperature Seasonality	Temperature Seasonality	C	The standard deviation of the monthly mean temperatures.
bio5	Max Temperature of Warmest Month	Max Temperature of Warmest Month	C	The highest temperature of any monthly maximum temperature.
bio6	Min Temperature of Coldest Month	Min Temperature of Coldest Month	C	The lowest temperature of any monthly minimum temperature.
bio7	Temperature Annual Range	Temperature Annual Range	C	The difference between the Maximum Temperature of Warmest Period and the Minimum Temperature of Coldest Period.
bio8	Mean Temperature of Wettest Quarter	Mean Temperature of Wettest Quarter	C	The wettest quarter of the year is determined (to the nearest month), and the mean temperature of this period is calculated.
bio9	Mean Temperature of Driest Quarter	Mean Temperature of Driest Quarter	C	The driest quarter of the year is determined (to the nearest month), and the mean temperature of this period is calculated.
bio10	Mean Temperature of Warmest Quarter	Mean Temperature of Warmest Quarter	C	The warmest quarter of the year is determined (to the nearest month), and the mean temperature of this period is calculated.
bio11	Mean Temperature of Coldest Quarter	Mean Temperature of Coldest Quarter	C	The coldest quarter of the year is determined (to the

				nearest month), and the mean temperature of this period is calculated.
bio12	Annual Precipitation	Annual Precipitation	kg m-2 year-1	The sum of all the monthly precipitation estimates.
bio13	Precipitation of Wettest Month	Precipitation of Wettest Month	kg m-2 month-1	The precipitation of the wettest month.
bio14	Precipitation of Driest Month	Precipitation of Driest Month	kg m-2 month-1	The precipitation of the driest month.
bio15	Precipitation Seasonality	Precipitation Seasonality	Unitless	The Coefficient of Variation is the standard deviation of the monthly precipitation estimates expressed as a percentage of the mean of those estimates (i.e. the annual mean).
bio16	Precipitation of Wettest Quarter	Precipitation of Wettest Quarter	kg m-2 quarter-1	The wettest quarter of the year is determined (to the nearest month), and the total precipitation over this period is calculated.
bio17	Precipitation of Driest Quarter	Precipitation of Driest Quarter	kg m-2 quarter-1	The driest quarter of the year is determined (to the nearest month), and the total precipitation over this period is calculated.
bio18	Precipitation of Warmest Quarter	Precipitation of Warmest Quarter	kg m-2 quarter-1	The warmest quarter of the year is determined (to the nearest month), and the total precipitation over this period is calculated.

bio19	Precipitation of Coldest Quarter	Precipitation of Coldest Quarter	kg m-2 quarter-1	The coldest quarter of the year is determined (to the nearest month), and the total precipitation over this period is calculated.
dem	elevation	elevation	m	Surface elevation above sea level.
glz	glacier elevation	glacier elevation	m	Surface elevation of the glaciers above sea level.
tz	air-temperature lapse rate	air-temperature lapse rate	K/m	The atmospheric temperature lapse rate as Kelvin per meter. Negative values indicate a decrease in K with altitude.

Table 4. timeID and the respective start and end year used for the aggregations. All data follows a proleptic-gregorian calendar.
